Summary

All my life I've been a tinkerer. I've been fascinated by computers, software, and the ever-changing technological world.

I achieved my bachelor's in computer science to deepen my understanding of how software works, and I am currently enrolled to obtain my master's in the same field. My understanding of software concepts provides a strong foundation for problem solving in various situations.

I began my career working as a full stack java developer but have transitioned over to a C# stack the past few years. I've worked with teams to revamp government web applications to bring them up to modern security and appearance standards. I'm always ready to learn more and tackle new challenges.

EXPERIENCE

Tennessee Comptroller of The Treasury, Nashville — C# Full Stack Developer

JUNE 2022 - PRESENT

Developed .NET web applications for cost tracking from the ground up. Built on backend services using C# and .NET Core. Web UI designed in Blazor. We also used Azure and Azure functions for extended uses.

Tennessee Comptroller of the Treasury, Nashville — Java Full Stack Developer

APRIL 2021 - JUNE 2022

Maintained and extended Adobe Experience Manager systems. Built using the JCR and sling architecture. I implemented new features utilizing java 11 and javascript.
